

NEXUS 365™

SOLUTIONS

FINALLY, A COMPLETE SOLUTION FOR CONFIGURATION MANAGEMENT

The NEXUS 365™ configuration management solution is a radical breakthrough that changes the nature of the configuration management discipline. It brings new capabilities that simplify and streamline the course of configuration management in a tool to improve configuration management decision making. Take control of configuration management outcomes, minimize risk of configuration errors, and protect deployment timelines with the NEXUS 365™ configuration management platform.

MAKING IT EASIER TO MANAGE CONFIGURATIONS

NEXUS 365™ defines a method that codifies configuration management practices. Make inroads into configuration management with an application instrument to enable probing configurations across your D365 environments and legal entities. The NEXUS 365™ configuration compare feature is a powerful vehicle to help you determine which configurations are in sync across all your legal entities—and which are different—such that you can act accordingly.

NEXUS 365™ is adapted to challenging configuration management complexities confronted in environments, where for example the configurations are spread across multiple legal entities. The key is its handling of the resolution process. Configurations are inherently difficult to monitor, and this tool yields controls to more effectively uncover configuration differences and resolve errors.

ORIGINS

THE ORIGIN OF NEXUS 365™

In fact, the ideas underpinning NEXUS 365™ ultimately originated in technical consultations—helping organizations with configurations gone astray—as solutions which reflect empirical experiences encountered in the field. Fundamentally, NEXUS 365™ seeks to refine a company's basic configuration management processes to meet changing configurations more effectively. In the intervening years, NEXUS 365™ was designed with these insights in mind, to respond to the demands and overcome the obstacles common in the practice of configuration management. The result is a realistic suite of tools that help take control of configuration projects—no matter the type.

INSIGHTS

REAL-TIME INSIGHTS

NEXUS 365™ accommodates the configuration variability that reaches high levels during implementations and enhancements. Instantly see your configurations across all legal entities as they currently stand, then translate those insights, enabling immediate action to align configurations where necessary.

PRODUCTIVITY

PRODUCTIVITY

Organizations need an accurate, responsive tool for tracking configuration in detail. With NEXUS 365™, get unmatched speed and configuration intelligence, enabling impressive productivity for your high-demand configuration management, bringing the power and usability of descriptive information about configurations. Discovery and identification let you dynamically track every configuration across your solution for any Dynamics workflow. Easily uncover configuration difference details, make changes to bring them into balance, or export comprehensive reports. Eliminate the administrative burden of manual, configuration comparisons and spreadsheets throughout the configuration data lifecycle. From discovering differences between instances of D365 configurations, to improving business outcomes via configuration workflow efficiency.

NEXUS 365™ is able to resolve differences quickly and completely—an especially powerful technique in configuration environments which extend across multiple legal entities, where resolving differences commonly proves complex.

Arrive at a new level of performance that comes from embedding lean configuration principles and practices throughout the enterprise.
